December 31, 2015

**FOR IMMEDIATE RELEASE**

**BEACH ADVISORY**

The Department of Planning and Natural Resources (DPNR) announces that the Beach Water Quality Monitoring Program, which evaluates weekly water quality at popular swimming beaches throughout the Territory by sampling for Enterococci Bacteria and Turbidity, which is a measure of water clarity, advises the public of the following:

**DPNR did not perform water quality analysis at any of the designated beaches throughout the Territory during the week of December 28, 2015 through January 1, 2016, as the laboratory was closed due to the holiday season.**

High levels of Enterococci Bacteria and Turbidity may be caused by runoff due to heavy rains, heavy marine vessel traffic, high wave activity near the shoreline, irresponsible recreational use, etc. Runoff can consist of sediment, pesticides, animal feces and oil & grease, all of which are harmful to the waters of the Territory.

DPNR will continue to monitor these popular swimming areas. DPNR also recommends that you use your own discretion when swimming or fishing at the designated beaches. If the waters appear muddy or murky or have foul odors, do not swim or fish. For additional information regarding water quality call the Division of Environmental Protection at 773-1082 in St. Croix.
