3.0 HAZARDS IDENTIFICATION

Emergency Overview

Material is initially derived from fermented molasses. Fermentation can yield carbon dioxide with possible traces of ethanol or volatile fatty acids (e.g. acetic, propionic, lactic, or butyric) and if exposed to a spark or flame may result in an explosion. These conditions should be avoided. If maintenance of tank requires entry by personnel, OSHA’s Confined Space standard (29CFR1910.146) shall be complied with. If welding is to be performed, the tank should be gas freed and only certified welders shall perform welding operations.
Potential Health Effects

**Eyes** - Mild irritant  
**Skin** - None  
**Inhalation** – Insufficient oxygen may be present in vessels containing the product due to the generation of carbon monoxide during fermentation
