FOR IMMEDIATE RELEASE

BEACH ADVISORY

The Department of Planning and Natural Resources (DPR) advises the public that the Beach Water Quality Monitoring Program conducts weekly assessments of water quality at popular swimming beaches throughout the Territory. Monitoring includes testing for Enterococci bacteria, an indicator of potential contamination, as well as turbidity, which measures water clarity.

During the week of August 3-7, 2026, DPR collected and analyzed water samples from 30 designated beaches across the Territory.

Based on the laboratory results, the following beaches met established water quality standards and are considered safe for swimming and fishing:

St. Croix		
Cane Bay	Grapetree Beach	Rainbow Beach
Prosperity Beach	Ha'Penny Beach	Shoy's Beach
Cramers Park	New Ft. Louise Augusta	Stony Ground
Dorsch Beach	Pelican Cove (Comorant)	Buccaneer Beach
Fredriksted Public Beach	Princess Condo Row	Chenay Bay
Gentle Winds	Protestant Cay	Sprat Hall

St. Thomas		
Secret Harbor	Lindbergh Bay	Vessup Bay
Lindqvist Beach	Brewers Bay	Bolongo Bay
Frenchman's Bay	Magens Bay	
Coki Point	Hull Bay	
Sapphire Beach	Vessup Bay	

Water Island
Honeymoon Beach

Please note: Samples were not collected at the following beaches:

- *Water Bay on St. Thomas*
- *Bluebeards Beach on St. Thomas*
- *All beaches on St. John.*

Therefore, the water quality at these beaches is unknown.

Please be advised that anyone swimming in waters contaminated with sewage, stormwater, or with large amounts of sargassum may be at an elevated health risk due to elevated concentrations of bacteria or other contaminants. Waters impacted by sewage, stormwater runoff (i.e., guts, puddles, and drainage basins), large amounts of sargassum, or any area that appears discolored or has foul odors should be avoided. DPNR will continue to monitor the impacted waters.

For additional information regarding water quality, call the Division of Environmental Protection at 773-1082 in St. Croix or 774-3320 in St. Thomas.
